How to install iis web server on windows computer

To install IIS,

**Step 1:** In Windows 11, navigate to Control Panel > Programs > Programs and Features > Turn Windows features on or off.

**Step 2:** Expand the Internet Information Services node and make sure the following features are selected.

- IIS Management Console
- .NET Extensibility 4.8
- Application Initialization
- ASP.NET 4.8
- ISAPI Extensions
- ISAPI Filters
- Default Document
- Static Content

**Step 3:** Click OK to install the selected features.

After IIS is installed, a Default Web Site is automatically created.

**Step 4:** Open a Web browser and input "http://localhost/" in the address bar.

The IIS welcome screen displays, which indicates the Default Web Site is working properly.
