

Azure Hierarchy Story – Society Construction Example

Story – Nayi Housing Society ka Construction

Socho ek nayi **Housing Society** ban rahi hai jiska naam hai *Cloud Residency*.

1. Society Owner = Tenant Root Management Group

- Sabse upar ek Owner hai jo poori society banwa raha hai.
- Owner ke paas full control hai aur wahi decide karta hai ki kis contractor ko kaam milega.
- Ye Owner hi rules banata hai, jaise – "Sab kaam safety norms ke hisaab se hoga".
- Azure me ye hota hai **Tenant Root Management Group**.

2. Department Managers = Management Groups

- Owner ke neeche alag-alag Managers rakhe gaye:
 - Electrician Manager (jo saare wiring kaam dekhega)
 - Plumbing Manager (jo saare paani pipeline ka kaam dekhega)
 - Construction Manager (jo building banayega)
 - Security Manager (gate aur guards ka kaam dekhega)
- Ye managers apne-apne team ke rules banate hai, lekin Owner ke rules sabko follow karne padte hai.
- Azure me ye hote hai **Management Groups**, jahan tum **RBAC aur Policy apply** kar sakte ho.

3. Bank Account = Subscriptions

- Har Manager ka apna **Bank Account** hai jisme uske kaam ka paisa aata hai.
- Electrician ka alag account, Plumber ka alag, Builder ka alag.
- Matlab har ek ka **billing alag hota hai aur invoice alag generate hota hai**.
- Azure me ise bolte hai **Subscription (Billing boundary)**.

4. Projects under Manager = Resource Groups

- Ab maan lo Electrician ke paas alag-alag projects hai: Wiring for Tower A, Wiring for Tower B.
- Plumber ke paas bhi projects hai: Pipeline for Tower A, Pipeline for Tower B.
- Ye projects grouping hai sirf management ke liye, taaki kaam organize ho.
- Azure me ise bolte hai **Resource Group (logical grouping)**.

5. Workers & Tools = Resources

- Ab har project ke andar actual workers kaam karte hai – Electrician workers, Plumber workers, Construction workers.
- Inke paas tools hote hai jo kaam karte hai (jaise drill machine, pipe cutter, wires).
- Azure me ye hote hai **Resources (VM, Storage, DB, App Service)** jo actual kaam karte hai.

Summary (Society Construction → Azure Mapping)

- Society Owner → Tenant Root Management Group (Top level, RBAC & Policy sab par)
- Managers (Electrician, Plumber, Builder, Security) → Management Groups (Rules specific department ke liye)
- Bank Account of each Manager → Subscription (Billing & Invoice alag)
- Projects (Tower A Wiring, Tower B Plumbing) → Resource Groups (Logical grouping of resources)
- Workers & Tools → Azure Resources (VM, Storage, DB, etc.)
