

■ Funny Story: Linux System Commands as a Political Party ■

Socho tum ek ****Neta (System Admin)**** ho aur tumhari ****Party = Linux System**** hai. Ab tumhe apni party ke workers (processes/resources) ka hisaab rakhna hai:

1. ****lscpu**** – Neta bolta: “Mere paas kitne chamche (CPU cores) hain aur wo kitni speed se kaam kar rahe hain?”
2. ****free -h**** – Neta bolta: “Party fund (RAM) me kitna paisa free hai aur kitna already kharch ho gaya?”
3. ****df -h**** – Neta bolta: “GoDown (Disk) me kitne poster aur pamphlet bhar gaye hain aur kitni jagah abhi khali hai?”
4. ****cat /etc/os-release**** – Neta puchta: “Apni party kis high-command (OS) ke under registered hai?”
5. ****hostname -i**** – Neta bolta: “Mera election office ka exact address (IP) kya hai?”
6. ****uptime**** – Neta bolta: “Humari party kitne saal se active hai?”
7. ****ps**** – Neta bolta: “Abhi kaun-kaun chamche (processes) ground pe kaam kar rahe hain?”
8. ****top**** – Neta bolta: “Mujhe live batao kaun chamcha sabse zyada paisa aur resources use kar raha hai?”
9. ****kill **** – Neta gussa hokar bolta: “Ye worker gadbadi kar raha hai, ise party se nikal do!”
10. ****du -h**** – Neta bolta: “Kaunse area (folder) ne sabse zyada poster chhap liye hain?”

■ Matlab Linux system ek ****Political Party**** hai, aur commands ek ****Neta ke funny sawaal**** hain.
