

■ Story – Bike aur City ka Address Socho tumhare paas ek **bike** hai aur tum apne dost ke ghar jaana chahte ho. Absolute Path (Poora Address) Agar tum GPS on karte ho aur type karte ho: "Meerut City → Shastri Nagar → Block B → House no. 45"

Matlab tumne **city se lekar ghar tak poora address** diya.

Isse chahe tum kahi bhi ho, tum seedha pahunch jaoge. Linux me bhi jab tum / (**root**) se lekar poora address likhte ho to wo **absolute path** hota hai.

Example: /home/jay/Documents/file.txt Relative Path (Shortcut Address) Ab maan lo tum already **Shastri Nagar Block B** me khade ho.

Tumhara dost bas bolta hai: "Bhai saamne jo 2nd ghar hai wahi mera ghar hai."

Matlab ab poora address dene ki zarurat nahi hai.

Ye hua **relative path**. Linux me bhi agar tum current location (pwd) ke hisaab se rasta dete ho to wo **relative path** hota hai.

Example: Documents/file.txt ■ Simple trick yaad rakh: **Absolute Path** = GPS ka poora address.

Relative Path = Jahan tum abhi khade ho, wahan se shortcut direction.
