

■ Story: Chintu ka Business aur Cloud

■ Phase 1: Traditional IT

Chintu ka ek mithai shop tha – "Chintu Sweets". Usne apni website ek local server par host karwai. Server setup me kharcha zyada tha – hardware, electricity, cooling aur IT staff alag. Website limited traffic handle karti thi.

■ Phase 2: Demand Badhi

Diwali ke time mithai ki demand 10x badh gayi. Website crash ho gayi, orders fail hone lage. Agar naye servers kharidta toh kam se kam 2-3 weeks lag jaate. Tab tak festival khatam ho jaata.

■ Phase 3: Cloud Computing

Chintu ke dost ne advise diya – 'Cloud me shift kar le'. Usne website cloud pe migrate kar di. - Auto-scaling se demand ke hisaab se servers badhte-ghatte rahe. - Sirf utna paisa diya jitna use kiya. - World-wide accessibility mil gayi. - Maintenance aur backup ka tension vendor ne le liya.

■ Result

Chintu khush, customers khush, aur business boom kar gaya ■. Cloud ne usko festival season me bachaya aur profit dilaya.

■ Moral of the Story

Traditional IT = Fixed, Costly, Slow, Maintenance-heavy Cloud Computing = Flexible, Cost-effective, Fast, Managed Services

Aspect	Traditional IT	Cloud Computing
Setup	On-premises servers, slow setup	Quick deployment in minutes
Cost	High upfront (CapEx)	Pay-as-you-go (OpEx)
Scalability	Weeks/Months lagte hain	Auto-scale instantly
Maintenance	In-house team needed	Vendor manages
Accessibility	Limited, VPN required	Anywhere via internet
