
Linux File System: Ek Nazar Me 🌳

Linux file system ek ped (tree) jaisa hota hai, jisme sabse upar root directory (/) hoti hai. Sabhi dusre directories aur files isi ke andar hote hain.

User Se Sambandhit Directories 🏠

- /root: Ye root user (system administrator) ka home directory hai. Ye Linux ka 'king' ya 'admin' ka personal room hai.
- /home: Isme normal users ke liye personal directories hoti hain, jaise /home/banti ya /home/babli. Ye users ka ghar hai.
- /lost+found: System crash ya error ke baad recover hui files yaha mil sakti hain. Ye 'khoya-paya' section jaisa hai.

Commands Aur Programs □

- `/bin`: Isme basic user commands hote hain jo sabhi users istemal kar sakte hain, jaise `ls`, `cp`, aur `mv`.
 - `/sbin`: Isme system commands hote hain jo aam taur par sirf root user hi chalata hai, jaise `reboot` aur `shutdown`.
 - `/usr`: Ye software aur applications ke liye hai jo system me install hote hain.
 - `/opt`: Isme extra, optional softwares rakhe jate hain jo third-party vendors ya baad me install kiye gaye hon.
 - `/lib`: Isme libraries hoti hain, jo programs ko sahi se chalane ke liye zaroori hoti hain.
-

System Files Aur Data □

- `/etc`: Is directory me configuration files hoti hain jo system ki settings aur rules ko define karti hain.
 - `/var`: Isme changing data rakha jata hai, jaise ki logs, mail, aur cache. Iska data lagatar badalta rehta hai.
 - `/tmp`: Ye temporary files ke liye hai jo thode samay ke liye chahiye aur baad me automatically delete ho jate hain.
 - `/boot`: Isme booting ke liye zaroori files hoti hain, jaise kernel aur boot loader, jo system ko start karne me madad karti hain.
 - `/proc`: Isme running processes aur system ki live jankari hoti hai. Ye ek virtual file system hai.
 - `/srv`: Isme service related data hota hai, jaise ki web server (Apache ya Nginx) ya FTP server ka content.
-

Devices Aur External Media □

-

/dev: Yaha device files hoti hain. Hard disk, pen drive, ya CD/DVD jaise devices ko system ek file ke roop me yahan dikhata hai.

-

/media: Jab aap external devices jaise pen drive ya CD lagate hain, to ve yahan mount hote hain.

-

/mnt: Ye bhi ek temporary mount point hai jise aap manually kisi device ko mount karne ke liye istemal kar sakte hain.
