

■ Azure Cloud Manual Management Flow (Hindi-English Mix)

1. Requirement Gathering (■■■■■■■■■■ ■■■■)

Client se baat hoti hai aur unki ■■■■■■ note hoti hai. Example: Client bolta hai ek Web App chahiye jo 24/7 chale.

2. HLD – High Level Design

Blueprint jisme pura system ka overview hota hai. Example: Web App + Database + Load Balancer + Backup Strategy.

3. LLD – Low Level Design

Detailed design jisme har resource ka config hota hai. Example: VM ka size, Storage type, VNet CIDR range.

4. Team Hiring & Roles

Architect → Design banata hai

Cloud Engineer → Resources deploy aur manage karta hai

DevOps Engineer → CI/CD pipelines banata hai

Developer → Code likhta hai

Security Engineer → Security aur compliance manage karta hai

5. Manual Deployment on Azure

Azure Portal par jaake manually resources create karna. Example: VM, VNet, NSG, Load Balancer configure karna.

6. Testing & Validation

Check karna ki sab sahi chal raha hai. Example: App open ho raha hai, DB connect ho raha hai, Backup kaam kar raha hai.

7. Handover to Client

Documentation ke sath project client ko handover karna.

8. Management & Monitoring

Azure Monitor + Alerts set karna. Manual patching, scaling aur troubleshooting karna.

Step	Process
1	Requirement Gathering
2	HLD (High Level Design)
3	LLD (Low Level Design)
4	Team Hiring & Roles
5	Manual Deployment
6	Testing & Validation
7	Handover
8	Management & Monitoring
