

****IT Project Flow in Azure – Ghar Banane Jaise** Ø<ßàØ=Ü»**

****1. Client Requirement Gathering – Plot Choose Karna** Ø=ÜÝ**

Jaise ghar banane se pehle plot ka size, location, aur design samajhna padta hai, IT project me client se **requirements gather** karte hain.

* Client se poochte hain: Application ka purpose kya hai, kitne users honge, data kaise store hoga, uptime requirement kya hai.

* Example questions:

* “Application globally accessible hoga ya India-specific?”

* “High availability chahiye ya normal availability sufficient hai?”

* “Budget kya hai aur compliance rules kya follow karne hain?”

Ye **plot aur foundation decide karne ke jaise** hai.

****2. Architecture & Plan – Ghar Ka Design** Ø<ß×þ**

Jaise architect decide karta hai ki bedroom, kitchen aur living room kaise arrange honge, IT me **solution architect** decide karta hai:

*Application ka architecture** (2-tier, 3-tier, microservices, serverless)

* Azure services ka selection: Virtual Machines, App Services, SQL Database, Storage, VNet, NSG, Load Balancer

* Disaster Recovery aur Backup plan design karna

* Cost estimate aur scalability plan

Yaha **blueprint** ban jata hai, jaise ghar ka drawing plan.

****3. Landing Zone Design – Ghar Ki Foundation Aur Plot Division** Ø<ßá**

Ghar me foundation strong aur plot me space allocate karte hain, IT me Azure me **Landing Zone design** hoti hai:

- * Subscription & Resource Group design
- * VNet peering aur subnets define karna
- * NSG, Firewall, VPN, Load Balancer setup
- * Identity & Access Management (Azure AD) setup

Yahi foundation par applications deploy honghi.

****4. Deployment – Ghar Banana** Ø=Ý(**

Jaise ghar me bricks, roof, walls, plumbing lagate hain, Azure me **resources deploy** karte hain:

- * Virtual Machines, App Services, SQL Databases deploy karna
- * Storage aur networking configure karna
- * Security rules aur backup implement karna

Deployment ke baad, application **live aur ready** ho jata hai, jaise ghar ready to live.

****5. Testing & Validation – Ghar Ki Inspection** Ø=Ý(**

Ghar ready hone ke baad electrician, plumber sab check karte hain, IT me:

- * Application functional test
- * Network latency & performance test
- * Security compliance check
- * Backup & DR test

****6. Management & Monitoring – Ghar Maintain Karna** Ø<ßà&™p**

Ghar me maintenance karte hain – painting, AC service, cleaning. IT me:

- * Azure Monitor, Log Analytics setup
- * Resource scaling aur patching
- * Backup monitoring & DR drills
- * Cost monitoring

Yahi **day-to-day management** hota hai.

Bhai, ye pura flow simple hai:

Requirement !' Architecture !' Landing Zone !' Deployment !' Testing !' Manage & Monitor

Jitna ghar strong aur well-planned hoga, IT project utna hi stable aur scalable hoga.
